1. Introduction to WeChat Mini Programs
After a slow start, WeChat Mini Programs have exploded since the beginning of 2018

1M Mini Programs

200M Daily Active Users (DAU)

95% of ecommerce brands have an MP

63% of the 1B WeChat users have used them

Average time spent using Mini Programs (minutes per day)

Feb. 2017: 1.6
Dec. 2017: 9.8
Jun. 2017: 13
Mini Programs already represent 20~30% of traffic

Distribution of user traffic across Apps and mini-programs (July 2018), in millions

Data from the Top 100 apps with an accompanying Mini-Program; all numbers rounded to nearest million. Source: Quest Mobile, 2018. Quest Mobile ‘TRUTH’ Data Set (August 2018), Resonance Analysis
A much better access experience

Source: Mindworks
Mini Programs = “Instant” Apps embedded in WeChat for disposable interactions, at a fraction of the cost of an App

**LIGHT & FAST**
- 4 Mb codebase, much quicker to load than an App
- Loads from Tencent servers
- No updates needed: the latest version is automatically loaded
- Cached on the phone
- Home screen shortcuts (Android only)
- Works offline: display ID, calculator, etc.

**TIGHTLY EMBEDDED INTO WECHAT’S ECOSYSTEM**
- >60 entry points (and counting!)
- Directly shareable in chats
- “Deep linking” to a specific subpage of the MP
- Easy, normalized login
- Seamless integration with WeChat features: Member Cards, IoT/Bluetooth devices, Coupons, WeChat Pay...
- Can access WeChat info against permission (fapiao info, phone number, addresses...)

**COST EFFECTIVE**
- Unique codebase across iOS and Android, no need to maintain 2 APP versions
- 20-50% of the development cost of an APP
- Much shorter time-to-release
Low acquisition cost through accessibility: sharing is the #1 entry point overall

Mini Program Traffic by source, June 2018

- Sharing, 34.6%
- Quick entry, 25.9%
- Official accounts, 14.1%
- QR codes, 9.8%
- Redirects, 6.6%
- Template message, 3.7%
- Search, 2.9%
- Pay, 1.1%
- Other: coupons, LBS etc, 1.3%

2. Mini Program Analytics Setup
2.1 Overall MP Strategy
If you track your website using a 3rd party measurement solution, you should do the same for any type of WeChat Mini Program. It’s the best way to have total control over the data collection quality, and get more insights with regards to user behavior.

Victor Ariza, Analytics Project Manager at LVMH
Each WeChat service account can have a total of 13 Mini-Programs attached to it: 10 owned directly, and 3 third-party MPs. This allows you to break down your Mini Program presence over multiple MPs with singular, focused purposes. Compared to a regular App, they need to be understood very fast, especially for infrequent use. It is recommended to offer a user experience as simple as possible, and to not try to replicate a fully blown App (read more [here](#)).

**BEST PRACTICE:**

1 MP

= 1 core functionality & 1 main business goal
KFC provides an array of services to its customers through dedicated Mini Programs, from delivery to social responsibility.

Although fragmented and providing each a particular service, they are all held together by a “Hub” MP.

KFC has 21 official accounts linked to their Mini Programs, of which one is the official national KFC account, and 20 focused on specific cities.

The drawback is it increases the complexity of the performance tracking, with the multiplication of traffic flows and entry points.
Which touch points to focus on?

Map of the main Mini Program entry points within the WeChat ecosystem
Integrating an MP with 3rd Party analytics tools

Tracking WeChat mini programs performance is possible at two levels:

- Quantitative aggregate level: using the default WeChat MP backend or third-party tools like Aladdin
- Individual user behavior analysis: each visitor can be tracked individually via an identifier pair called the UnionID (MP level) and OpenID (Official Account level). With a social CRM system (sCRM), you can then connect MP usage with official account engagement, website visits, purchase history and more.

The default WeChat backend typically falls short in tracking capabilities, as it only allows for aggregate analysis. It also lacks a lot of the features you need to track conversions at the micro level. E.g. custom events such as interactions with a specific element of the MP page.

To track interactions at an individual user level, you will need a 3rd party social CRM solution. They can be omni-channel, or WeChat specific.
2.2 Tracking Objectives
Before the MP is designed, you need a clear picture of your business goals and how success will be measured (KPIs). Once the MP is released, you should focus on tracking conversion and adjust/update the MP accordingly.

### 01 Business Goals
- Identify existing customers among WeChat followers
- Increase repeat orders
- Offer a seamless omni-channel customer experience
- Increase engagement and brand awareness
- Generate qualified leads with name and phone number

### 02 KPIs
- % of new followers identified as customers
- % of sales from repeat customers, order frequency, average basket
- % of MP users from sharing, from favorites
- % of MP visitors considered engaged
- Overall MP conversion: lead generation, action completion etc.

### 03 Macro Conversions
- Journey completions
- Repeat MP users
- End conversion: form filling, registration, purchase completion

### 04 Micro Conversions
- Journey steps, page visits
- Sharings
- Interactions with page elements
- Page scroll > x%
- Customer service requests
- Traffic to linked Mini Programs
- Reviews, ratings, comments
- Content interactions: live streaming views, video views
**KFC+ (肯德基+)**

**Business Goals:**
- In-store orders
- Delivery orders
- Repeat orders, average basket
- % of WeChat users registered with the loyalty program
- Offer a seamless experience via a "Hub" linking all Mini Programs together

**KPIs:**
- Active Users (DAU, MAU)
- New Users % over last X weeks
- Registered Users with loyalty program
- Retention Rate
- Average Revenue per user, avg. basket, lifetime Value
- Conversion Rate
- Number of Shares
- Traffic from favoriting and search

**Macro Conversions:**
- Journey completions
- Repeat MP users
- Churn
- End conversion: registration, orders

**Micro Conversions:**
- Journey steps, page visits
- Sharings
- Interactions with page elements
- Customer service requests
- Traffic to linked Mini Programs
KPIs:
- Active Users (DAU, MAU)
- New Users
- Usage frequency across the 3 functions: IIT, company valuation, pay scale
- Retention Rate
- Source Channels
- Number of Shares
- Leads generated

Macro Conversions:
- Journey completions
- Repeat MP users
- Churn
- Clicks on phone number

Micro Conversions:
- Sharings
- Interactions with page elements

Business Goals:
- Brand awareness & engagement among a target audience of foreign business owners and managers
- Collect engagement information from WeChat followers to personalize content targeting
- Generate qualified leads & inquiries

SJGrand Calculator
Using MP performance tracking to feed your optimization strategy

The key to defining your mini program performance is to identify how your entry points perform in regards to your mini program’s core engagement/conversion goals such as:

- Which WeChat posts from OA have brought the most traffic or has the highest conversion rate?
- Which KOL campaign has generated the most sales or engagement on the mini program looking at goals related to engagement or sales?
- Which advertising channel has brought the most qualified traffic on the mini program?
- Which form field has the highest drop-off?
- Which features on the Mini Program are the most used?

And optimize the design or features accordingly (e.g., removing form fields that are causing high abandonment, removing clutter on a product page to increase adding to cart, add helpers on checkout steps, retarget cart abandonment with transactional notification messages, etc.)

Just like any other digital product, it is also crucial to A/B test your WeChat Mini Program. Some solutions such as AB Testin offer such testing out of the box.

In order to A/B test a Mini Program, you need to have two different versions which you can direct a portion of the traffic to.
We can demonstrate WeChat chatbot performance through numbers. We did A/B testing and a side by side funnel analysis for Budweiser on the effectiveness of chatbots and how we helped them better convert followers to members and sales. Leverage Chatbot + Analytics to better support, covert retain users and discover unique qualitative insights through conversation.

Weiqi Li, Vice President at Rikai Labs
How to build your MP performance tracking dashboards?

Mini Programs being just one of the multiple pieces of your WeChat puzzle, you most likely need an overall solution to track all your WeChat data points at once:

1. OA
2. H5 Media Campaigns
3. Website with JSSDK
4. Mini Programs
5. Chatbot
6. CS Livechat
7. WeChat H5 Store

This is why we recommend to primarily look at API connectors when choosing your MP tracking solution, to be queried by your overall data visualization/dashboarding (Tableau, Google Data Studio, etc.)

However, if you prefer to manage the MP tracking dashboards separately, each platform has its own data reporting capabilities. We recommend looking at the visualization engine and its flexibility vs. out of the box features: Talking Data, for example, allows users to build their own fully custom dashboards.
2.3 Tagging plan: Principles & Implementation
The purpose of tracking a Mini Program doesn’t differ from any digital initiative. You will want to tie users segments to conversions, marketing campaigns, key UI triggers and backend/transactional data. It’s currently impossible using the native analytics UI and functions. Considering the flexibility of the framework used for Mini Programs, I’d recommend working at the API level from the planning phase and use a pure player in analytics for reporting.

Thomas Portolano, Digital Lead APAC at Christie’s
Tagging Plan

Capturing transactional macro conversions is often the easiest, as they are often usually tracked automatically, e.g., for an E-commerce Mini Program. On the other hand, non-transactional macro conversions may require to add specific tracking, such as traffic source for example. Implementing funnels to track the path to your macro conversions is also imperative to detect the choke points or issues with the design, the content, etc.

Tracking micro conversions is where default Mini Programs analytics typically fall short, as they do not measure interactions with elements of your interface (unless they send to another page). You need then to prepare a plan of what you want to measure, and augment your mini program with third-party analytics to track custom events.

Download our event tagging template and implement event tracking and funnels on your MP: [http://cpc.cx/nl2](http://cpc.cx/nl2)
Can we still use Google Analytics to track WeChat Mini Programs?

Yes! Most international brands are still using Google Analytics as their central analytics solution for all their web properties. In that regard, it is possible to use GA as analytics for your WeChat Mini Program.

MPs cannot fire the default frontend GA script. There is an existing connector available that will send hits to GA from the Mini Program backend.

But beware of the limits:
- Because the google-analytics.com domain name is not ICP enabled it cannot be added to an MP’s server whitelist, you need to proxy the requests to GA with an ICP-enabled server
- MP-specific events cannot be tracked (e.g., tracking entries from individual QR code scan)
Download our MP tagging plan spreadsheet template

The next slides are detailing our Mini Program spreadsheet template and the logic behind each tab. It has been designed specifically to be used with Aladdin, but it can be adapted to any other solution.

We recommend you download it to better understand our descriptions:

Click: [http://cpc.cx/nl3](http://cpc.cx/nl3)

Or scan QR code:
Integrating Google Analytics to a web app is simply generating a code snippet for testing and live account with 2 different views and insert it in the header and footer of the page. On the other hand, most of the Mini Program analytics solutions generate a key and a SDK. Like a website, you can have multiple Mini Programs under the same account and do mini programs cross-tracking analysis.

<table>
<thead>
<tr>

**Aladdin Implementation Guide**
Tagging Plan Tab 2 - Mini Program QR Code Detailed Listing

Just like WeChat Official Account QR codes, you can create MP QR codes with parameters to track sources of scanning: campaigns, posters, business cards, referrals etc.

<table>
<thead>
<tr>
<th>Name</th>
<th>Generate Code with ID &amp; Secret</th>
<th>Generate Code with Access Token</th>
<th>QR Code Group</th>
<th>Page Path</th>
<th>Style</th>
<th>1 - Parameter Name</th>
<th>1 - Parameter Value</th>
<th>2 - Parameter Name</th>
<th>2 - Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brand_Hairstyle_Shanghai_Spring17_OOH</td>
<td>Mini Program ID</td>
<td>Mini Program Secret</td>
<td>accesstoken</td>
<td>Campaign</td>
<td>Round</td>
<td>Channel</td>
<td>OOH</td>
<td>Campaign</td>
<td>ID985</td>
</tr>
<tr>
<td>Jingan_002</td>
<td>Store</td>
<td>/</td>
<td>Round</td>
<td>City</td>
<td>Shanghai</td>
<td>Store</td>
<td>JA002</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ArtFair_Shanghai_Booth_Register Page</td>
<td>Media</td>
<td>/register</td>
<td>Round</td>
<td>Event</td>
<td>art_fair_100518</td>
<td>Media</td>
<td>a45</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Tagging Plan Tab 2 - Mini Program QR Code Grouping

The grouping QR Code Grouping tab is used to outline the grouping logic of QR codes into categories: e.g. campaigns, KOL, stores, POS, events, etc… and therefore see the performance of each entry point and see the return on investment for every group from a higher level.

1) Values contained within ## represent a variable value
2) Currently there’s an 8 parameter per event limit.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
<th>Parameter 1 Name</th>
<th>Parameter 1 Value</th>
<th>Parameter 2 Name</th>
<th>Parameter 2 Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Campaigns</td>
<td>Place all QR codes related to marketing campaigns in this group</td>
<td>Channel</td>
<td>#Campaign name#</td>
<td>Campaign</td>
<td>#Campaign ID#</td>
</tr>
<tr>
<td>KOL</td>
<td>Place all QR codes related to KOL campaigns in this group</td>
<td>KOL</td>
<td>#KOL Post#</td>
<td>Article Bottom</td>
<td>#KOL ID#</td>
</tr>
<tr>
<td>Stores</td>
<td>Place all QR codes related to stores in this group</td>
<td>City</td>
<td>#City Name#</td>
<td>Store</td>
<td>#Store ID#</td>
</tr>
<tr>
<td>Media</td>
<td>Place all QR codes related to media Buying in this group</td>
<td>Event</td>
<td>#Event Name#</td>
<td>Promo</td>
<td>#Promo ID#</td>
</tr>
</tbody>
</table>
Tagging Plan Tab 4 - Mini Program Funnel Management

Funnels are working the same way as in Google Analytics.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
<th>Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Checkout</td>
<td>Path the user goes through to complete a purchase</td>
<td>Page Path: /cart &gt; /payment &gt; /thankyou</td>
</tr>
<tr>
<td>Form User Info</td>
<td>When user fills out a form</td>
<td>Custom event ID#: 2-5</td>
</tr>
<tr>
<td>Add to cart</td>
<td>When user adds an item to cart in a specific order</td>
<td>Pages path: /Category1, /product3, /cart, /thankyou</td>
</tr>
<tr>
<td>Store Locator</td>
<td>User accesses store locator and selects store</td>
<td>Event 6 &gt; Page: /storelocator &gt; Event ID 7</td>
</tr>
<tr>
<td>Gift Card</td>
<td>Path the user goes through to purchase a gift card</td>
<td>Page Path: /giftcardlisting &gt; /giftcarddetail &gt; /payment &gt; /thankyou</td>
</tr>
</tbody>
</table>
Same as for the QR codes, and using the same principles as most social CRMs, you can segment and group your Wechat Mini Programs users according to specific events, interactions or users behaviours.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>New User Purchase</td>
<td>Users who accessed the MP for the first time and completed a purchase</td>
</tr>
<tr>
<td>QR Code Registered</td>
<td>Users who accessed the MP through a QR code and registered</td>
</tr>
</tbody>
</table>
1) Aladdin’s current limit is 1000 Custom Events
2) Key is a string, and the character length must be less than 255.
3) When the value is string, the character length must be less than 255.
4) When the value is a JavaScript object, the value of the object can only be string type.
5) String supports special characters. But not included (English comma, English colon: dot.)
6) The value parameter of the event cannot be empty
7) Values contained within two dashes ## represent a variable value
8) Currently there is no limit to the number of parameters per event.

### TRACKING PLAN

<table>
<thead>
<tr>
<th>#ID</th>
<th>Name</th>
<th>Key</th>
<th>Value</th>
<th>Description</th>
<th>Javascript code</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Name</td>
<td>key</td>
<td>value</td>
<td></td>

<td>form_phone</td>
<td>page</td>
<td>#page path#</td>
<td>When user fills in phone on form</td>
<td><code>app.aldstat.sendEvent('form_phone',{ 'page': '#page path#', 'form_name': '#form name#' });</code></td>
<td><code>app.aldstat.sendEvent('form_phone',{ 'page': '/content/article1', 'form_name': 'article_download' });</code></td>
</tr>
<tr>
<td></td>
<td>form_name</td>
<td></td>
<td>(Possible Values)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
We have our own backend and customized analytics tools to examine wellbeing and optimize the Mini Program accordingly. I.e., we optimize based on real-world efficacy, as opposed to Mini Program usage or other common metrics. An analytics platform with efficacy metrics would be tricky, and niche, but probably good for the community.

Bechara Saab, CEO & Chief Scientist at Mobio Interactive
3. Benchmark of Current Analytics Solutions
How to implement your tagging plan on a Mini Program?

The **WeChat backend** is the simplest way since the tracking can be done from the backend, much like Google Tag Manager. However, such events are not available yet to third-party tools.

Other third party-tools, paid or free, will provide you with several extra data points and features allowing you to measure the performance of your MP more accurately.

Most of the analytics tools use Javascript code to track custom events. This means that you will need your developer or vendor to implement your tagging plan into the Mini Program code.

There are two main categories of third-party tools: 1) pure WeChat Mini Program players, and 2) cross-channel analytics solutions. While pure players tend to have more MP specific tracking features and cover a lot of use cases with out of the box templates, cross-channel analytics have the advantage of gathering App, H5 and website tracking all in one place.

We have not thoroughly tested all the solutions listed in the following benchmark: feature comparison was done via analyzing each solutions’s documentation, accessing demos and reading online reviews. The results are gathered in a shared Google Spreadsheet. You are welcome to contribute to this benchmarking effort: drop us a line and we will be happy to grant you editing rights to this shared knowledge base.

Who We Are
SJ Grand Financial and Tax Advisory is a professional service firm that specializes in accounting and tax services for both local and international clients. Our expertise covers all aspects of financial management, including tax planning, compliance, and reporting. We provide a wide range of services to help our clients navigate the complexities of the tax system in China.

We have a team of experienced professionals who have a deep understanding of the local tax laws and regulations. Our goal is to help our clients save money and maximize their financial performance. We work closely with our clients to develop tailored solutions that meet their specific needs.

Contact Us
For more information or to schedule a consultation, please contact us at info@sjgrand.com. Our team is always available to answer any questions you may have.

Need to design, build or audit/improve a WeChat Mini Program? Connect with us!

- WeChat Solutions Design & Development
- UX & UI
- Online Performance & Analytics

31Ten is a digital agency specialized in building tailor-made web applications for WeChat: Mini Programs, "H5" or integrations with existing customer-facing or enterprise-grade solutions. In 3 years of existence, we have served 40+ brands across 90+ projects.

31°10′N: our name is derived from Shanghai’s latitude, where we are based on serving as a compass that guides our clients in leveraging China’s super app to reach, engage, convert and serve an increasingly agile customer. Our constant R&D ensures we will help you choose the best interface, user flow, and WeChat infrastructure to make your project a success. So get in touch with one of our expert consultants today and we’ll show you how we can build your WeChat footprint effectively, together.
