## WeChat Work 3.0 2020 Platform Overview

企业微信3.0概观

Image: Mike Chai

### WeChat Work is uniquely important among China's workplace collaboration apps

WeChat has a monopoly on consumer messaging in China

Over the last two years, Tencent has re-positioned WeChat Work as the business backend for WeChat: sales, CRM, customer service, and much more

Internally: Enable the efficient flow of information

Externally: Connect 1.1B WeChat users

WeChat Work 2019 Annual Conference 企业微信2019年度发布会

"Hello WeChat Work"

December 23, 2019

If WeChat Work was purely a tool for internal workplace messaging, I think its scope and significance would be much smaller. Only when it extends outside the enterprise does it produce greater value. <u>People are the service</u>.

> Allen Zhang Founder of WeChat

企业微信如果单纯定性为企业内部的沟通工具,我认为它的场景和意义会小很多。只有 它延伸到外部的时候,才会产生更大的价值。 人即是服务。

张小龙

### 什么是企业微信?

# WeChat Work is like having a custom version of WeChat just for your organization.

You control who gets to join your account.

You choose what apps and mini-programs your team needs.

Create as many internal official accounts and groups as you need to manage communication effectively.

### WeChat Work is like WeChat plus

#### Video Conferencing

Free audio and video calls with up to 300 people

Seamlessly integrated into chat, right where you need it

#### Company app store

Deploy internal and third-party apps to any employee group

#### Document collaboration

Docs and sheets that can be edited from mobile and desktop

#### WeChat CRM The only app that is a true WeChat CRM backend

#### Announcements

Like WeChat OAs but higher volume and easy segmentation

#### User Management

You control who joins your account, including easy removal

#### Enhanced security

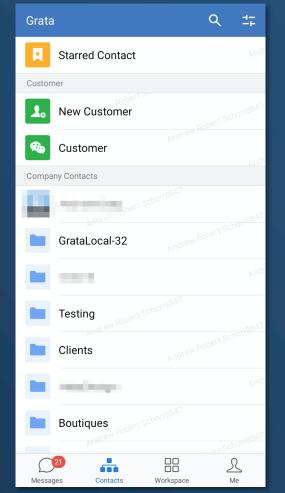

Custom policies to protect privacy and data security

### WeChat Work Mobile App

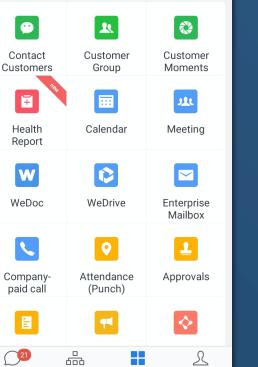

#### Chats and Apps

### A short history of WeChat Work

When WeChat started getting popular in 2011, lots of people quickly started using it at work, too. This was generally a good thing, but it was not without friction between management and employees.

WeChat began to address this friction in the fall of 2014 with Enterprise Accounts (企业号), which worked within WeChat. These only started getting interesting in the summer of 2015 when the addition of enterprise messaging (企业消息) meant you could group all your work messages into a separate folder in WeChat.

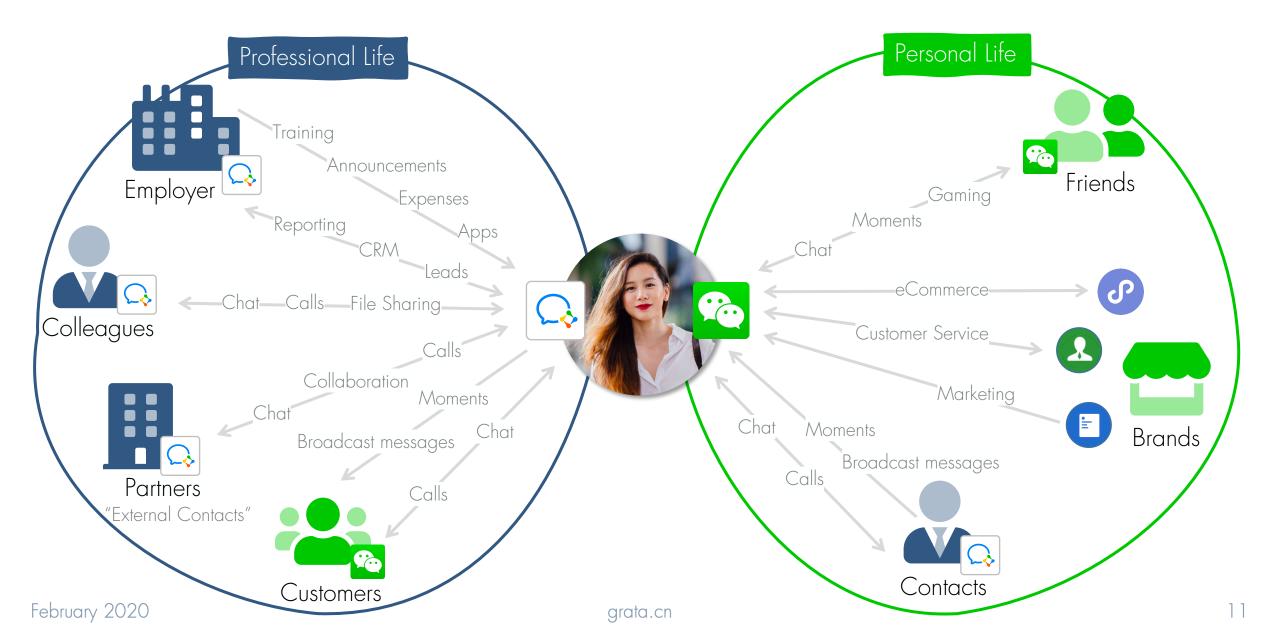

In April of 2016, Tencent broke out the enterprise functionality into a separate app and renamed it 企业微信, eventually settling on the English name

**WeChat Work**. A separate app naturally upset everyone, until we came around to the idea that it was helpful for restoring a bit of work-life balance. It also meant Tencent could make faster progress building out the core apps and features businesses expected in a productivity and collaboration tool.

At the WeChat developer conference in January 2018, Allen Zhang announced that making WeChat Work and WeChat interoperable was one of the major focuses of his team. Four months later "WeChat Connect" (连接微信) was released in closed beta. Each new app update increased its scope, eventually renaming the feature simply Customers in early 2019.

### Help employees separate their business and personal lives

### Frequently asked questions (1 of 2)

Do employees have to download a new app?	How much does it cost?	ls it available in English?	How long does it take to register?
No	It's free	Yes	Less than a minute*
You can enable the "WeChat Workplace" (微工作合) feature which allows colleagues to send and receive messages and notifications from within WeChat. Note that WeChat Work apps and some message types are not supported in WeChat Workplace.	You don't have to pay for WeChat Work unless you need advanced features like WeChat Pay and WeChat Customers. Those require a 300RMB verification fee every two years, but you can share your company verification from an existing Official Account. You can choose to purchase additional cloud storage space or phone minutes to dial out. Also, many third-party apps have paid tiers.	<ul> <li>The desktop and mobile app, the admin backend, and the help center are mostly translated in English.</li> <li>It's definitely usable for non Chinese speakers, though you will come across some sections that have not been translated yet.</li> <li>The developer documentation is only available in Chinese.</li> </ul>	*If your organizatiton already has a WeChat Official Account, you can clone a WeChat Work account from your WeChat Official Account backend and not have to re-enter all of your organization information. If you're new to WeChat, you'll have to submit a bit more information to get started, but it's gotten a lot easier over the years.

### Frequently asked questions (2 of 2)

Is this only for Chinese organizations?	Are people using WCW?	Where is my data stored?	Can I export my chat history?
Yes	Yes	It depends	No*
WeChat Work is limited to Mainland China enterprises, government bodies, and organizations.	The latest numbers that Tencent has shared are 2.5 million organizations and 60 million users. They also report that 80% of the top 500 organizations in China and 81% of the top 100 retail organizations have adopted WeChat Work.	All of your chat data is stored on Tencent's servers. If you use WeDoc and WeDrive for cloud file storage, those files are also on Tencent Cloud. If you access you own internal applications and file systems using WeChat Work's web browser, these would not be stored on Tencent's servers.	*Since WeChat Work disabled the enterprise messaging API several years back, you are no longer able to sync company chats to your own server. It is rumored, however, that organziations in select industries with compliance obligations (eg. banking) can still get access to their chat history. You need to know someone at Tencent to help you.
		Optional third-party applications will store your data on their own servers.	

### China's workplace messengers

#### 钉钉 "DingTalk"

China's dominant workplace messenger. Alibaba's app launched January 2015 and defined many of the features and tools of this category

#### 企业微信 "WeChat Work"

WeChat Enterprise Accounts launched as a new type of WeChat Official Account in September 2014. WeChat Work was broken out into a separate app in April 2016.

飞书 "Lark"

Rising star ByteDance, of TikTok fame, officially launched Lark in April 2019. Lark is big on collaboration tools and ByteDance has proven that they know how to build international products

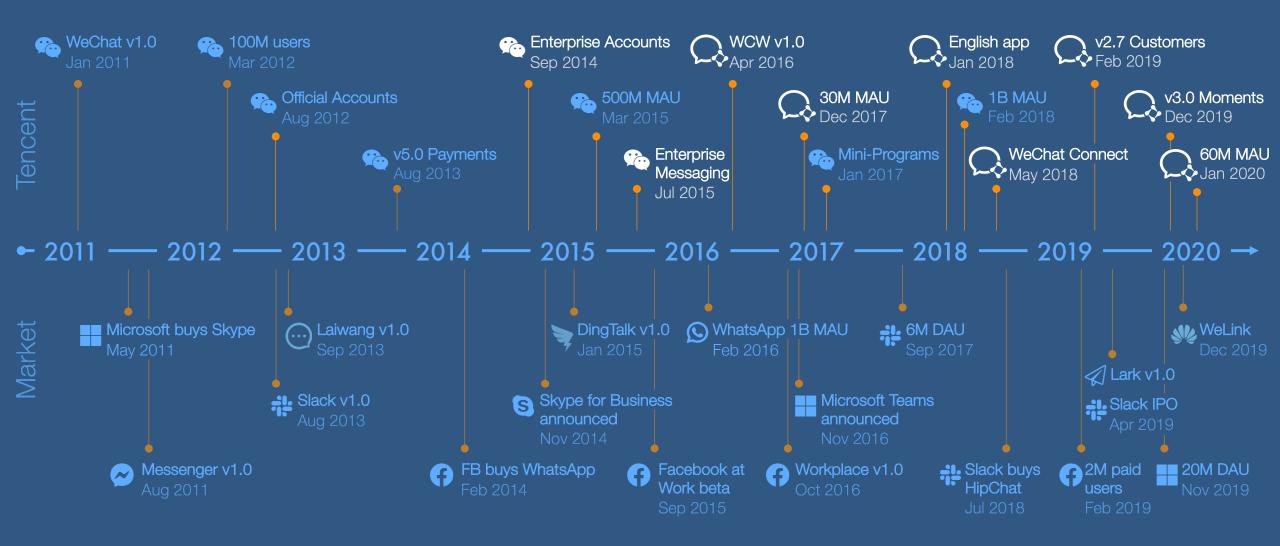

#### 华为云Welink "Welink"

WeLink v1.0 started as an internal Huawei app back in January 2017, only launching publicly in December 2019. It claims 1,000+ companies and 195,000 users.

### DingTalk

Apart from interoperability with WeChat, DingTalk and WeChat Work are basically at feature parity.

#### Message shortcuts

A clever feature that perhaps we see in WCW at some point: at the top of your chats window you can filter your messages by mentions, favorite contacts, messages you marked 'later', and files

#### External Contacts

DingTalk also has an external contacts (外部联系人) feature. Employees add customers manually, by batch import, or use an OCR business card scanner, but this is just a backend CRM function – it doesn't provide any benefit to customers. Customers and suppliers can only chat with your employees if they too are using DingTalk.

# ☆ Home <u>dingtalk.com</u> ④ Help <u>nh.dingtalk.com</u> ☆ Apps <u>appcenter.dingtalk.com</u> </>> Devs <u>ding-doc.dingtalk.com</u>

#### Message encryption

Optional paid subscription for double encryption (双重加密) on messages: one layer from Alibaba-invested DAS Security and one from DingTalk. DingTalk claims that no third party,

including DingTalk, can read messages in your "private vault" (企业信息的 私人银行).

#### February 2020

### Welink Huawei Welink

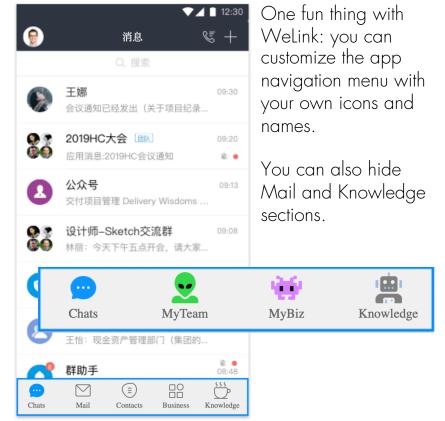

It's not clear to us how Huawei plans to compete against Alibaba and Tencent. WeLink's app interface, online documentation, and pricing strategy all feel like a previous generation of enterprise software.

WeLink claims to have 600 mini-apps (小程序), but we found only twelve apps in their third-party marketplace.

Huawei's app, admin backend, and their online tutorial videos are all noticeably slower to load outside of China, compared to Tencent and Alibaba products. Not a great advertisement for Huawei Cloud.

Until 1 June 2020 you can use WeLink for free with up to 1000 users and 100 video conference seats (unlimited call time).

쉾	Home	welink.huaweicloud.com
í	Help	support.huaweicloud.com/welink
	Apps	marketplace.huaweicloud.com/welink
	Devs	welink.huaweicloud.com/wecode

Lark

Lark has a refreshingly modern design and a more differentiated product than the other three apps. While many teams would be happy with the free versions of Lark, the paid tiers may get expensive quickly for large organizations.

#### Clever Features

Lark looks a bit like Slack, and similarly has put a lot of thought into how to manage messaging in an era of information overload: thread tracking, pinned messages, rich text snippets, and a folder of muted chats you don't need to follow closely.

The calendar is beautifully integrated with the ability to view the schedule of everyone in a group chat, create a group chat from a calendar event, and a comment thread on the invite for scheduling issues.

Lark documents are are edited in real-time with version tracking. Insert polls and links to group chats, and @ users to notify them about sections of the document.

#### Integrations

International users will see many integrations they recognize, like Google Calendar, Salesforce, Asana, Jira, Github, Jenkins CI, Trello, Expensify, and more.

### Comparative annual subscription cost by company size

		<b>DingTalk</b> 钉钉	<b>WeChat Work</b> 企业微信	Lark 飞书	Huawei WeLink 华为WeLink
	Small Enterprise	¥1,000	¥800 🚯	¥4,800	¥23,100 💰
200	20 users	Free	Free	¥20/mo/basic user	¥6,600
	200GB cloud	¥1,000 for 100GB 100GB free	¥800 for 100GB 100GB free	10GB/user included	¥1,500 for 150GB 50GB free

ļ	Medium Enterprise	¥400,000	¥320,000	¥240,000 🚯	¥569,500 💰
<u>,0,</u>	400 users	Free	Free	¥50/mo/business user	¥132,000
	40TB cloud*	¥400,000	¥320,000	100GB/user included	¥400,000
	25 conferencing seats	302 seats included	CV 300 seats included	25 seats at business tier+	¥37,500 for 25 seats
<b>#</b> 14	Large Enterprise	¥2,000,000	¥1,600,000 🚯	¥36,000,000 💰	¥6,275,000
<u>,00</u>	15,000 users G(0	Free	Free	¥200/mo/enterprise user	¥4,200,000
	200TB*	¥2,000,000	¥1,600,000	Unlimited storage at enterprise tier	¥2,000,000
	50 conferencing seats	302 seats included	300 seats included	50 seats at enterprise tier	¥75,000

JS\$1 = ¥7.0 RMB

#### ★ Cloud Storage

Cloud storage is really the only cost driver for DingTalk and WeChat Work. In order to make these comparisons as cleanly as possible, we have set cloud storage amounts based on Lark's paid tiers storage allotments. For organizations that do not need as much storage, DingTalk and WeChat Work are basically free, even at large scale.

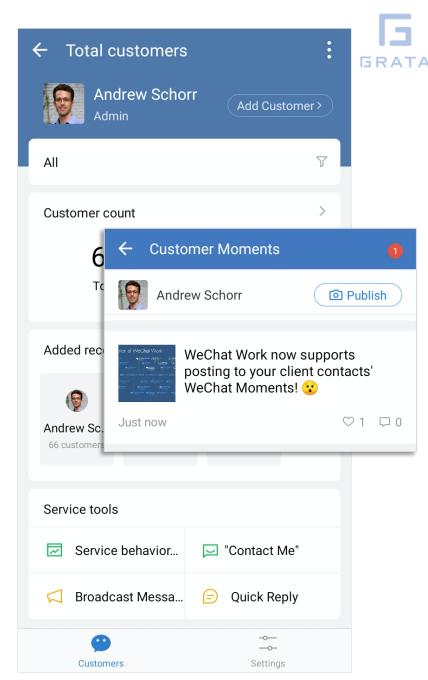

### Customers

Employees using WeChat Work (WCW) can connect to their customers using WeChat. A major focus for Tencent.

What's new:

- Employees can post to WeChat Moments
- Company and employee targeted broadcast messaging
- Mixed employee/customer group chats increased to max 200 users
- Custom CRM profiles and tagging
- 'Contact Me' individual and team QR codes and Mini-Program buttons
- Chat sidebar app pages

#### February 2020

### Mini-Programs

Mini-Programs are interoperable between WeChat and WeChat Work.

What's new:

- Bind MPs to your WCW account for employees to use
- Share MP pages to Customers via broadcast messaging
- Integrate staff 'Contact Me' buttons in your MP
- Develop internal MPs for employee use

← New Messag	e
Sent to	Filtered customers >

Choose from	n album
Add webpag	1
Add mini pro	ogram page

Sharing a mini-program to Customers via WeChat Work broadcast message feature

### Video Conferencing

The workplace messenger wars mean companies can save a lot of money on expensive video conferencing software subscriptions.

What's new:

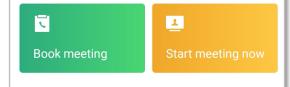

- Free video conferencing for up to 300 participants
- Live stream from any group chat
- Invite external users from WeChat to join a meeting (external users must have WCW installed on their phone)
- Screensharing, HD voice and video, background blurring

Organize and manage your online meetings efficiently

A maximum of 300 people can join the meeting

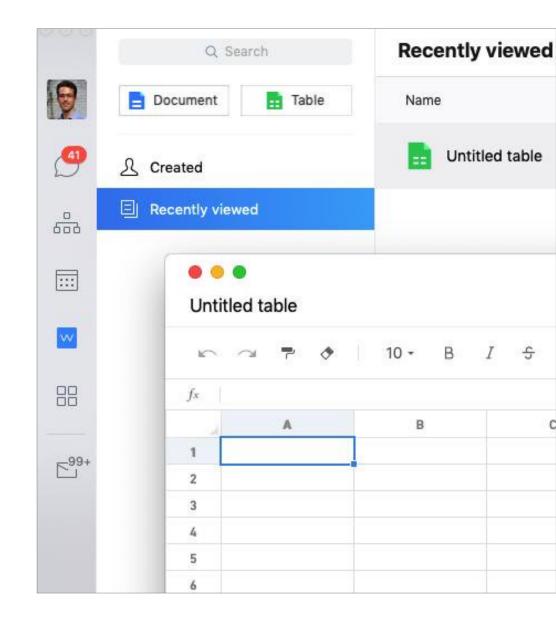

### WeDoc

Online real-time document and spreadsheet collaboration software.

#### What's new:

- Create and edit files from the mobile app, desktop app, and docs.qq.com that are interoperable with Microsoft Office.
- Works offline. Doesn't require a network connection.
- Set sharing permissions separately for internal and external users. Manage files in WeDrive cloud storage.

### Group chat bots

Share notifications and other content to group chats, including groups with Customers

What's new:

- Developers can automate updates from other applications to share information in group chats.
- Bots are only one direction; they don't have visibility to other messages in the group chat.
- Message types are text, mark-down text, images, and articles
- Companies can add bots on the backend that whitelisted uusers can choose to add to chats as needed

Five reasons to start using WeChat Work today

五大特色功能

# 5

### Separate work from your personal life

If you're like many companies in China who use WeChat for business messaging, the simple act of moving your work chats to another app can be a big benefit.

It's easier to find colleagues and break out many different topics into threads; easier not to miss important notifications.

Your work and social life have different schedules. This makes it easier to manage your attention and notifications according to your schedule.

	← Have a rest	
	Break	
	Break time	1 hr(s) >
	It's off-work time	
	Have a rest until	Next work day, 06:45 $$ $$ $$
	Workday	Mon,Tue,Wed,Thu,Fri >
	Set "off work" automatically	•
	Off-work time	Work day, 23:00 >
	When enabled, will automatically during off work hours on working	
	Allow Important Message No	otifications
Ú	When enabled. only receive notif	
-	It's off-work tim No notifications until tomorrow 09:00	e

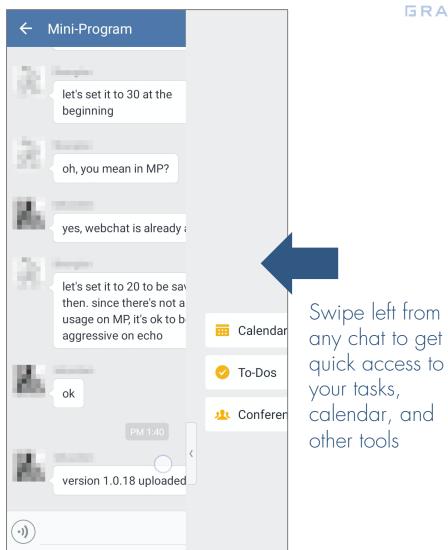

One of the biggest pain points of WeChat is that files shared in a group chat expire in a matter of days. With WeChat Work you can set cloud storage to six months.

Chat management	
Cloud Message Storage	180Day(s) T Sto
oloda Moodago otolago	15Day(s)
	30Day(s)
Maximum number of group members	90Day(s)
	✓ 180Day(s)
	Cloud Message Storage Maximum number of

This simple feature is a favorite for many teams. It puts tasks right where you need them.

- Long tap any message to create a task from the message
- Add teammates to shared tasks and schedule reminders
- Create a group chat from a shared task

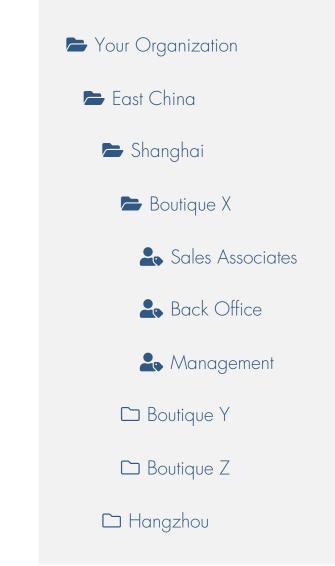

**G**RATA

Add employees to multiple departments and subdepartments; enter their position and add useful tags.

Employees benefit from having a searchable employee directory with real profile photos and separate Chinese/English display names.

Employers can apply the org chart setup to every aspect of WeChat Work: app visibility and distribution, reporting requirements, outbound messaging segmentation, employee contact visibility, etc. This is super useful.

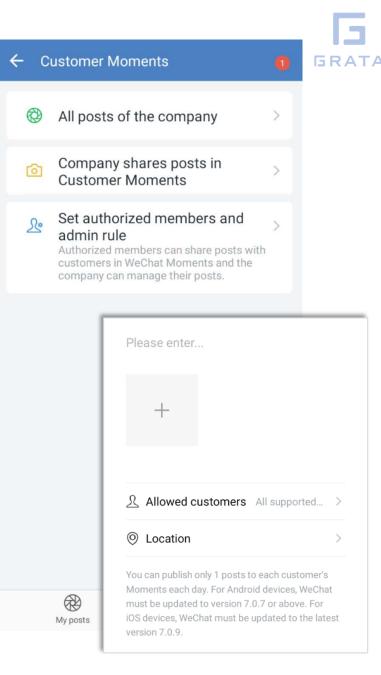

Interoperability with WeChat is without question WeChat Work's strongest asset.

For years, the #1 issue brands have had with WeChat is that their sales associates need to connect with their VIP customers in WeChat, but the brands have no visibility or ownership over their own customers. When an employee left, they took all their customer contacts with them.

This has been fixed. The latest update – allowing employees to post to their customers' WeChat moments – was the final feature we were waiting on.

# Privacy & Security

Five common dangers of using WeChat in the workplace

隐私与安全

Lots of large organizations ended up creating WeChat Official Accounts for internal announcements. There are some techniques you can use to try restricting it to only employees, but this is really a hack at best.

WeChat Work allows you to easily create dozens of your own 'apps' that resemble Official Accounts (broadcast messaging, menus, auto-replies), but crucially allow you to:

- Control which users/departments can see the app
- Easily segment each message recipient list
- Not worry about restrictive broadcast messaging quotas
- Remove sharing options and apply a security watermark on article content

# 4 Mistakenly adding the wrong person to chats

How many of your WeChat contacts use their real name and real photo?

How many, for example, "Alex"s do you have in your contacts?

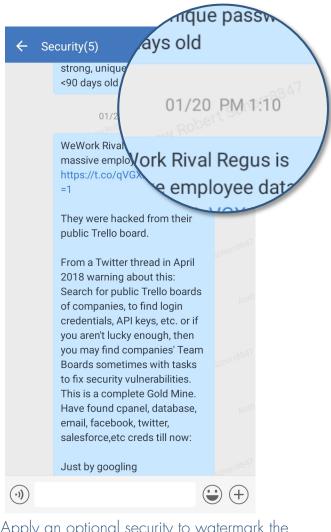

With WeChat Work, the company can use official employee profile photos, official English and Chinese names, and organize colleagues by department to prevent mistakenly adding the wrong person to a sensitive chat.

You don't want sensitive messages from group chats getting shared publicly.

WeChat Work lets you add a layer of extra security by watermarking the employee's username and last four-digits of their phone number across the background of group chats and user profiles.

Apply an optional security to watermark the employee's username in group chats

# 2 Former colleagues lurking in group chats

It's typical for an employee to belong to several dozen company WeChat group chats.

Each group potentially has a different group chat admin.

Most large companies struggle to remove employees from every group chat when they leave the company. Once removed, the employee still has access to all previous chat history.

With WeChat Work, once you disable someone's user on the backend, they are locked out of the app and all group chats immediately.

# Losing your company WeChat contacts

Sales leads and VIP customer contacts belong to your business.

Brands have struggled to retain their contacts as sales teams added their customers to their personal contacts for ease of communication and to post products to their Moments feed. When an employee left a company, those customers were their private contacts.

Now that employees can post to their customers' WeChat Moments feed, there aren't any good excuses remaining to not use WeChat Work.

# WCW Security Documentation & Certifications

#### SOC2 Type 1 and Type 2

Rigorous audit regarding policies and procedures encompassing the security, availability, processing, integrity, and confidentiality of customer data.

#### National InfoSec Protection – Level 3

#### 国家信息安全等级保护三级认证

Certified to standards of a national "level 3" asset, meaning any disruption could cause serious damage to social order and public interests, or damage to national security

#### Security White Paper

企业微信白皮书

A paper outlining WeChat Work's privacy and security policies for data, network and other assets.

#### ISO/IEC 27018

Code of practice for protection of personally identifiable information (PII) in public clouds acting as PII processors

#### ISO/IEC 20000

Requirements for an organization to establish, implement, maintain and continually improve a service management system

#### ISO/IEC 27001

Standards for managing the security of assets such as financial information, intellectual property, employee details or information entrusted to you by third parties.

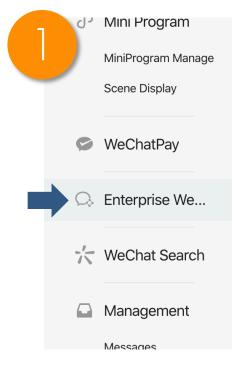

#### February 2020

# Getting started Registering an account and basic setup 如何开始

# Register a WeChat Work account

The easiest way to do this is from the backend of a verified WeChat Official Account.

Login to your WeChat backend and click on Enterprise WeChat from the side bar

menu

2

Click enable on the next page.

You will need your account owner to scan a QR code to confirm.

WeChat Work Enable

#### 💣 Requirements to Enable

 Official Accounts by government, media, businesses, or other organizations can enable this feature (!)

If you don't have a WeChat Official Account, you can register manually by clicking on the signup button on the WeChat Work homepage:

work.weixin.qq.com

# Who can register?

WeChat Work is currently available only for **Mainland China** enterprises, government bodies, and organizations.

Each organization can register a maximum of **five accounts**.

The person registering as the **admin** must have a WeChat account connected to a Mainland China bank account. You can be the admin for up to five accounts.

For large organizations with, for example, mostly independent business units, you can **link multiple accounts** together.

# Getting organizational buy-in

GRATA

Large organizations have internal challenges to consider when implementing a new program like WeChat Work. This presentation is designed, in part, as a resource to help you get to consensus in your organization. Here are some steps we recommend:

- 1. Register an account and start experimenting with a small team.
- 2. Identify key stakeholders and project owners.
- 3. Identify one or two key value propositions for each stakeholder.
- 4. Identify and mitigate any potential roadblocks or dependencies.
- 5. Design a pilot implementation. How will you measure success?
- 6. What does full implementation look like? Who are the key owners for each domain?

GRATA

Common objections

"lt's not secure" We often hear this even from organizations who know their employees are currently using WeChat for much of their business communication. Upgrading to WeChat Work resolves dozens of very real privacy and security dangers.

Organizations concerned about sensitive files being stored on Tencent servers can implement their own cloud file storage, so employees share links instead of files in WCW. Similarly, if you have a sensitive announcement to share, send a link card that opens to an article hosted on your server.

Use the previous slide on <u>security documentation</u> to help make your case.

#### Common objections

"Getting my team to use it will be too difficult" WeChat Work has several tools and incentives to help make adoption easy at scale, including:

- Batch user import templates
- Automated invites and recurring reminders
- Adoption monitoring
- A red packet incentive system (seeded with up to 10,000RMB)

You should also consider creating your own pull into WCW by providing some content or service exclusively there. Make employees download WCW to, for example, submit leave requests or to claim new customer leads from your website contact form.

#### Common objections

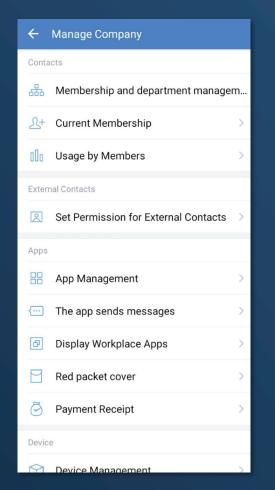

"My sales team already has all their clients in WeChat" This is likely the biggest hurdle for any retail or e-commerce company. Your sales team will be reluctant to give up full control of their key client contacts. But the longer you wait, the harder it will be to migrate. You need to get control of your organization's CRM.

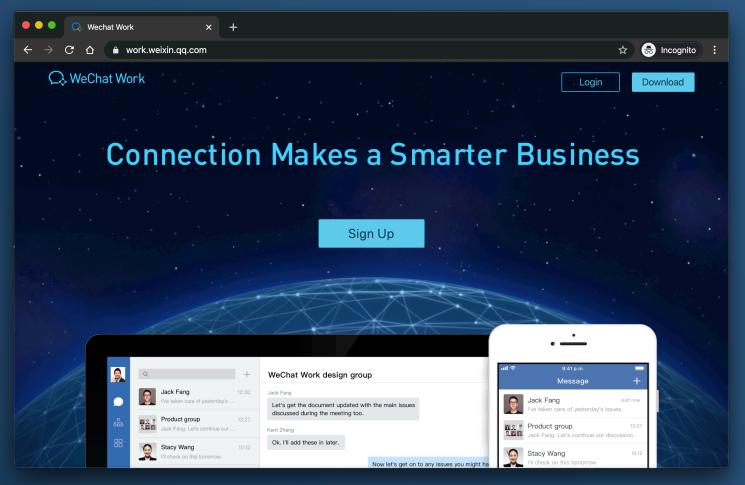

It's best to frame the conversation as an upgrade to your team's selling capabilities. This will be even more true with a reasonable investment of time, and perhaps some integration work. We cover this in detail later in the <u>Customer section</u>, but here are some areas to consider:

- Help generate content for their Moments posts and company messages
- Setup Quick Replies to make sales conversations more efficient
- Create funnels that send qualified leads into WeChat Work
- Integrate CRM and product data in the chat sidebar
- Create an incentive plan that rewards staff who bring in more customers

# WeChat Work backend

Admin users manage account settings from work.weixin.qq.com or from the Manage Company app located in the WeChat Work Workspace

February 2020

# Inviting your team

The first thing you need to do is decide how you will add your team. There are several ways to invite people to join your account.

Share a QR Code	Divite users from the backend	Share an invitation page	Users invite their colleagues	User directory integration
There are separate codes for the WCW app, and for WeChat Workplace (for users who are unlikely to download the app).	As you add users on the backend, choose to automatically send email and SMS invitations, or batch upload users and invite them all at once.	Get an invite link with a "Join" button if opened in WeChat or, if opened outside of WeChat, a QR code.	If enabled, existing members can invite colleagues from WeChat, from their device contacts, or by manually entering their information.	Sync your contacts to or from WeChat Work and another user directory. Supports read-only and read- write modes. Requires custom development.
Workplace code: My Company < WeChat Workplace	Get started at Contacts < Batch import/export	Go to Management Tool < Add members to copy the link	Go to My Company < Apply for joining settings to enable the setting	Go to Management Tool< Sync of Contacts

# Joining your account The central premise here is that only verified employees get access to your account. You can calibrate how users join your account to different levels of risk.

#### Less secure

Allow existing users to invite their colleagues to join

Go to My Company < Apply for Joining < Enable "Can be invited to company" Allow existing users to invite others to apply, but an admin must approve their application before joining

Previous step, plus enable "Admin's approval required" setting Only allow users to join your account who have already been added on your WCW backend by an admin

Make sure that My Company < Apply for Joining < "Can be invited to company" is not enabled

#### More secure 😔

Require additional login authentication on your own portal\*

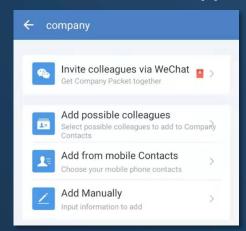

\*Requires custom development

Go to My Company < Security & Confidentiality < Set second verification

### Inviting users in WeChat (1 of 2)

Mobile phone:	+ 86 • Members can verify the mobile number to join the company.
Office Number:	
Email:	
Address:	
座机:	
英文名:	

# Member profiles

**Department**: Members can belong to multiple departments. Set a main (主) department for members, this will display first on their employee profile. Departments can have separate Chinese and English names.

**Tags** make it easy to select inter-departmental users when sending a broadcast message, setting app visibility, etc. Use <u>this template</u> to batch import tags to be applied to members or entire departments.

**Identity** is used in a few places in WCW, such as assigning group chat admin in department chats, and in the approval app, where "superior" users can approve requests from "normal members" in their department.

# Batch user upload

Download the Excel template <u>here</u>.

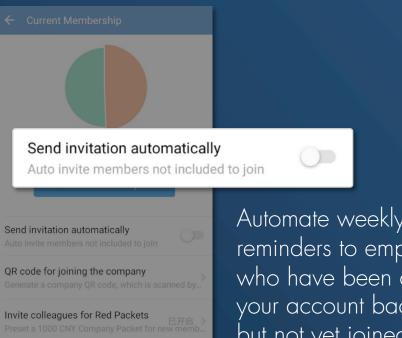

#### Note:

- Do not edit the column names
- Column names in red are required
  - Either mobile phone or email address is required
- User ID: The user ID must be unique. It can contain 1-32 characters including period, dash, and underscore.
- Departments: Use a slash to specify sub-departments. If you want to include English department names, use [EN:]. For example: "腾讯公司[EN:Tencent]/广州研发 部[EN:RDGZ]". For employees that belong to multiple departments, separate them with a semi-colon.
- **Phone number**: +86 phone numbers do not need the country code. Other numbers should use the "+" sign before country code and number

# Tools for managing adoption

Members not in contacts

Can be invited to the company

Membership Application

Automate weekly reminders to employees who have been added to your account backend but not yet joined your account.

Go to Workspace < Manage Company < Current Membership Filter your contacts page to see who hasn't joined your account and who hasn't downloaded the app yet. Easily resend batch invites to users.

# Super admin and sub-admin users

Setup sub-admin users with limited permissions to help manage large departments or multiple locations

#### Sub-admin

Sub-admin can have a scope for the entire account or just a single department. Set whether they have read-only or read/write access to users, apps, and devices in their scope.

#### Admin groups

To save time, save configurations of permissions that can be applied to multiple subadmin users.

#### Super admin

You can also add additional super admin users, who have all permissions for your account.

#### Service providers

You can give registered WCW service providers a QR code from your backend with permissions limited to just the scope of their service.

Go to My Company < Permission managment

# Contact visibility and privacy

WeChat Work has a simple yet extensible rules editor to apply custom privacy settings across your entire organization

#### **Restrict visibility**

Set users and departments who should be restricted to view only colleagues in their own department and any additional contacts you may select. Add exceptions for people in the departments for whom the rule does not apply. You can also restrict some employees from having any visibility to contacts.

#### Hide users

Set users and departments who should not be visible to other employees in your company directory. Add exceptions for any members who should be able to see the hidden users.

#### Hide sensitive data

Control which profile information is visible to other employees and, separately, what is visible to external partners and customers. You can also designate some sensitive members for whom only limited profile data is visible to other users, unless the user is on a whitelist.

#### Go to My Company < Contacts managment

# Example contact visibility configuration

#### These users

With the exception of

🛇 Management

Can only see colleagues in their own department and:

└ HR

🗅 IT Help Desk

🛇 Trainer

These users cannot view any company contacts:

🟷 Temp

WeChat Work has a simple yet extensible rules editor to apply custom privacy settings across your entire organization

#### Department group chat

If you enable this setting, a group chat will automatically be created for every bottom-level department (meaning those with no subdepartments) with three or more members. As you add and remove people to the department on the backend, the department group chat is automatically updated.

#### All Member Group

Similar to the department group chat, but for all members. Note that the maximum (internal) group chat size is 2,000 users.

All group chats allow you to mute all members, and whitelist exceptions, or add select members to be muted.

#### Creating group chats

Set the maximum group size (from five to 2,000) that can be created by non-whitelisted members. For example, allow any user to create a group chat of up to ten people, beyond that only select users have the permission to do so.

#### Go to My Company < Chat management

# WeChat Work Customers

Solving WeChat's biggest pain points for brands

The **status quo** for most companies in China is that employees connect to customers using their **personal WeChat**.

Not only do companies have no visibility into contacts, when an employee leaves the company to work for a competitor, they take all their key client contacts with them. The Customers feature allows employees to add their customers' WeChat accounts to their WeChat Work external contacts.

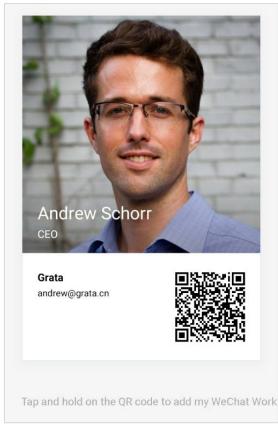

This allows companies to include WeChat customers in their **CRM** database. If an employee leaves the company, the company can **migrate contacts** and group chat ownership to other employees.

### Customer features

# Ę

#### Group Chats

Now up to 200 members: welcome greetings, quick replies, chat bots, and more

#### Quick Replies

Rely on prepared text answers to FAQ while chatting with customers

#### Broadcast Messages

Select any segmentation of Customers for personalized messaging at scale

#### WeChat Moments

Your sales team can now keep their favorite feature from WeChat: selling in Moments

#### **External Profiles**

Verified profiles help Customers trust they're speaking with a genuine employee

#### Contact Me

Individual and group QR codes and Mini-Program buttons to connect customers to employees

#### **CRM** Interface

Display custom CRM profile pages, managed tags, and contact export

#### App integrations

Build views of your own data into Customer chats: order history, product list, etc.

# Getting Started

) Enable Customers feature for designated employees

Ensure participating employees complete real-name verification

Review your external content and settings

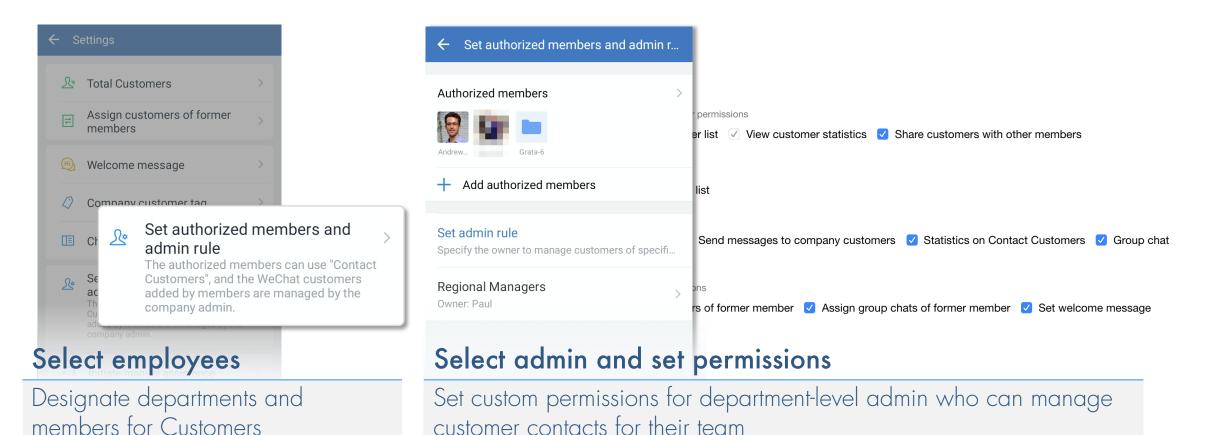

4) Set strategies for growing Customers

3)

# Enable Customers feature

Verified WeChat Work accounts can designate employees who can add WeChat users as external contacts.

Go to Customers < Settings < "Set authorized members and admin rule"

#### February 2020

# Real name verification

Chinese employees can verify their identity instantly entering their national ID number (身份证) and confirming by facial recognition. Employees without a Chinese ID will need to upload their passport and one form of supporting evidence. The review process usually takes a few hours.

### Customer entry point strategies

#### WCW Business Card

Share to WeChat, download as an image, or copy the email signature code snippet

#### Contact Me

Connect customers to a specific employee o<u>r teams by QR code</u>, MP button, menu button, or H5

**Group Chat** 

WeChat users can join group chats by scanning a QR code or from a mini-program button

#### Business card scanner

Contact information is updated to their user profile and the image is saved to their profile

### Shared contacts

Customers and colleagues can share contacts, the company can migrate contacts

#### Add WeChat contacts

Employees can send invitations to connect to their personal WeChat contacts

#### Scan their QR code

Scan a customer's WeChat QR code from the WCW app to connect

#### Phone number search

Find WeChat Customers by searching their mobile phone number in WCW

#### February 2020

### Marketing to WCW Customers

### **Broadcast Messages**

Employees can broadcast a text message plus image to multiple customer segmentations once per day per customer.

The company can suggest broadcast messages with text plus image, link, or MP page, by segmentation, to employees, who can choose to forward the message, once per week per customer.

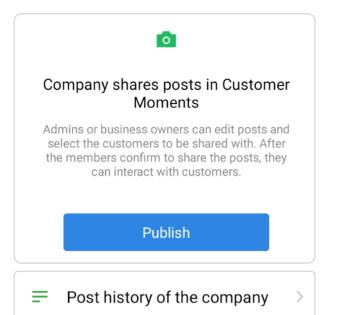

← Send messages to com	ipany cu	<b>=</b> •
Sent to Sele	ect customer	>

Enter text		
+ Add image/webpage/mi	ni program m.	

Notify members to send the mes

#### Moments

Employees can post text plus an image or link to customer segmentations, once per day per customer.

The company can suggest posts with text plus image or link by segmentation to employees, who can choose to post the message, four times per month per customer.

### **Group Chats**

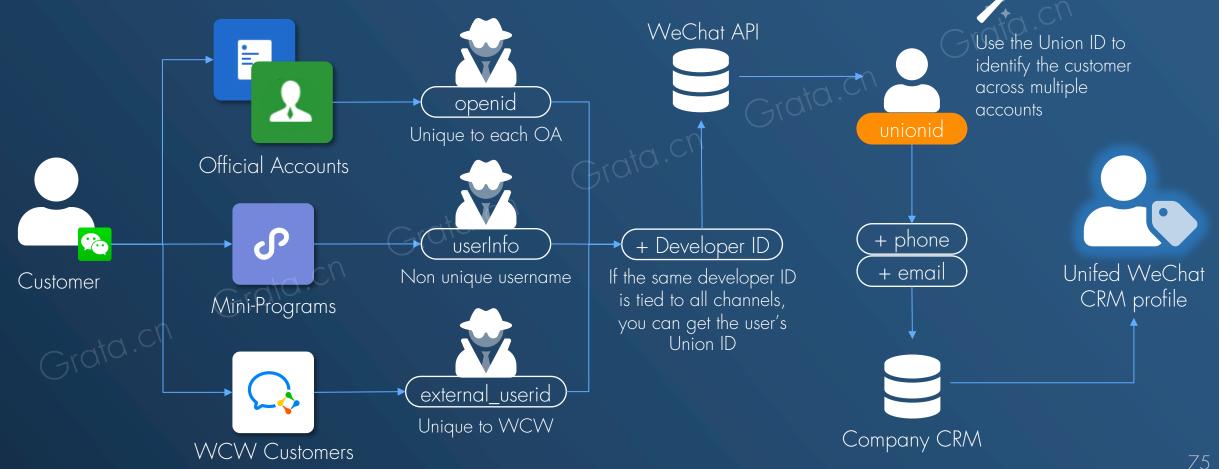

Group chats can be a powerful communitybuilding tool when done well. WCW's group chat manager gives you a dashboard to monitor group activity. You can also add chat bots, transfer ownership, set welcome messages, use quick replies, live stream, and more. Mixed WeChat-WCW group chats can have a maximum of 200 members.

#### February 2020

## Unified Customer Marketing

For high-affinity customers that follow your Official Accounts, interact with your Mini-Programs, and connect with your employees in WeChat Work, the best brands create a unified customer profile on their backend. You will need the user's Union ID to accomplish this.

## WeChat Customer Journey

Most brands will create a mix of digital touchpoints across their official accounts, mini-programs, and WeChat Work

### 微信客户旅程

February 2020

grata.cn

## WeChat Work Apps Workplace tools configured for your team

### WeChat Work Apps

Apps include Tencent "basic" apps, smart devices, third-party apps and miniprograms, and self-built apps and mini-programs.

Self-built apps don't require any coding to be useful. One way to think of them is as internal WeChat official accounts.

Each app can be enabled for all users or just a segmentation of users. Apps don't require any additional installation for your employees.

Each app can have its own list of admin users.

## Creating your own apps

One of the first things companies migrate to WeChat Work is their internal communication. For company announcements and internal notifications, you can setup an apps for each topic. Treat them like WeChat official accounts.

All you need to get started is an app name, logo, and to set user visibility. There's no coding required.

Use menu buttons to give employees access to related content and then use the broadcast messaging feature on the backend to send announcements.

### Self-built Apps

### Send Messages

Broadcast messages to any segmentation of employees from the WCW backend, or send messages via the API

### Receive Messages

View received messages and set auto-replies on the WCW backend, or forward messages to your own server

### $\equiv$ Custom Menu

Similar to Official Accounts, set 3x5 menu configuration for links, MPs, text messages, and more

### 😁 Add to chat sidebar

You can make WCW apps available in the chat side bar for use in external chats

## App Messaging

Message from any self-built app or use the Announcement app.

Unlike Official Accounts that only allow broadcast messaging four times monthly, app messages are basically unlimited.\*

And segmentation is easy.

\*Your broadcast message limitation is calculated as your WCW account user limit x 30. For example, unverified accounts have a maximum of 200 users, so you could send 6,000 daily messages. A message sent to 100 users counts as 100 messages.
